🏞️🚗 CAR RENTAL

1.1 Purpose of this project

The purpose of the Car Rental app is to support the car rental company. The main task of the application is to enable customers to get acquainted with the list of cars and their data, and then book the selected car. The application also has a customer panel that allows you to view orders and change account settings, leave comments, and an admin panel that allows, among other things, administration of orders and users, adding and editing cars, editing orders. The app also has a login and registration system for new customers.

1.2 Tools

In the project I used tools such as Spring MVC, Spring Security,AOP, MySql, FlyWay, Logback, JUnit, Mockito, Lombok, Thymeleaf, exception handling, localization and internationalization. Created my own exceptions and views for them.

1.3 Database schema
